

## **Guideline for Pre-approved Storm Doors**

**Approved August 2020**

Only "Full View" models are permitted, defined as doors where clear unobstructed glass covers at least 60% of the door's surface. Door and mounting frame to be white, complimenting entry door trim while allowing entry door color to be visible. Handle finish matches home entry door handle. Insect screen panel is permitted.

Full View doors are available in both single and double glass panes. Single pane doors are available including interchangeable screen panels. Double pane doors are available with hide away screens.

Storm doors matching the above specifications are Board and ARC pre-approved, but application still needs to be submitted through normal channels for quick acceptance. Submission of manufacturer and model information required. For pre-approved doors, the two \$25 application fees are waived.

Application for approval to install a storm door, which does not meet the above specifications, must be submitted along with the two \$25 application fees. Full description of the door is required.
